

Perkins Resources

Transfusion Science Research

Our Client a not-for-profit organisation responsible for the provision, collection, screening, processing and distribution of blood, blood products, tissues and related services Australia-wide currently has a vacancy based in Melbourne for a Research Fellow, Transfusion Science Research.

The responsibilities of the role include:

- conduct laboratory based research in accordance with an agreed project plan;
- prepare and maintain current and accurate records of research work carried out;
- prepare/contribute to reports, peer reviewed research publications and conference presentations;
- contribute to the broader program of research within the Division

To be considered for this role you will need to hold a relevant doctoral qualification in a relevant life science/biomedical discipline. Demonstrated research experience in at least one of the following disciplines: cell biology, haematology, immunology, biochemistry with excellent analytical and problem solving skills. Project Management skills including a demonstrated ability to work to deadlines while maintaining high quality standards and a successful record of research and publication within the life sciences /biomedical which give evidence of research ability is required. Experience in providing support and assistance to research team members (and research students if required).

Ideally you will have well developed oral/written communication skills with demonstrated experience in preparing and writing peer-reviewed research publications and reports. Good interpersonal skills and demonstrated ability to establish and maintain effective working relationships with a variety of stakeholders.

Although not essential, experience and knowledge of translational research in biomedical science and experience in primary cell culture and cell function assays such as flow perfusion and migration assays. Capacity to support external grant application processes and demonstrated ability to work effectively as part of an interdisciplinary research team would be highly regarded.

An attractive remuneration package will be negotiated for the successful candidate. If you are interested in this exciting and challenging role please send your CV to me on deirdre.perkins@perkinsresources.com or call me for a confidential discussion on 07 3369 3800.
